-!- SUBUNIT: HOMOLIMER, DISCULFIDE-LINKED (BY SIMILARITY).

-!- SUBCELLULAR LOCATION: Secreted (Probable).

-!- TISSUE SPECIFICITY: HIGHLY EXPRESSED IN THE DEVELOPING LIMB BUD, INITIALLY DETECTED IN THE DISTAL MESENCHYME, AND LATER LOCALIZING TO REGIONS AROUND THE DEVELOPING BONES. IS ALSO EXPRESSED IN ADULT DENTAL FULL AND BRAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CHAIN

-1- FUNCTION: INHIBING AND ACTIVINS INHIBIT AND ACTIVATE,
RESPECTIVELY, THE SECRETION OF FOLLITROPIN BY THE PITUITARY GLAND.
INHIBINS/ACTIVINS ARE INVOLVED IN REGULATING A NUMBER OF DIVERSE
FUNCTIONS SUCH AS HYPOTHALANIC AND PITUITARY HORMONE SECRETION,
GONADAL HORMONE SECRETION, GERM CELL DEVELOPMENT AND MATURATION,
ERYTHROID DIFFERENTIATION, INSULIN SECRETION, NERVE CELL SURVIVAL,
ENERYONIC AXIAL DEVELOPMENT OR BONE GROWTH, DEPENDING ON THEIR
SUBUNIT COMPOSITION. INHIBINS APPEAR TO OPPOSE THE FUNCTIONS OF
ACTIVINS.
-1- SUBUNIT: DIMERIC, LINKED BY ONE OR MORE DISULFIDE BONDS.
INHIBIN A IS A DIMER OF ALPHA AND BETA-A.

C; Comment: The source of this protein is ovarian followlar fluid.
C; Comment: The mature protein is the carboxyl-terminal segment of a precursor polypeptid ifferent forms of inhibin have been isolated (A and B) that differ in the amino-terminal C; Comment: Inhibin is secreted by ovaries or testes and inhibits the secretion of follit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                inhibin beta-B chain precursor - pig (fragment)

C; Comment: The source of this protein is ovarian follicular fluid.

C; Comment: The mature protein is the carboxyl-terminal segment of a precursor polypeptid ifferent forms of inhibin have been isolated (A and B) that differ in the amino-terminal c; Comment: Ilhibin is secreted by ovaries or testes and inhibits the secretion of follit c; Superfamily: inhibin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             R;Ge, W.; Gallin, W.J.; Strobeck, C.; Peter, R.E.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
